## Description

1

What does this `bDNhcm5fdGgzX3IwcDM1` mean? I think it has something to do with bases.

Bases challenge

This challenge probably wants us to decode from a base to text

The screenshot shows the CyberChef web application interface. The browser address bar displays the URL: `https://gchq.github.io/CyberChef/#recipe=From_Base64('A-Za-z0-9%2B/%3D',true,false)&input=YkROaGNtNWZKR2d6WDNJd2NETTE`. The interface is divided into three main sections: Operations, Recipe, and Input.

- Operations:** A list of operations including "base", "To Base", "From Base", "To Base32", "To Base45", "To Base58", "To Base62", "To Base64", "To Base85", "To Base92", "From Base32", "From Base45", and "From Base58".
- Recipe:** The "From Base64" operation is selected. It shows a dropdown menu for "Alphabet" set to "A-Za-z0-9+/", a checked box for "Remove non-alphabet chars", and an unchecked box for "Strict mode".
- Input:** The input field contains the base64 string: `bDNhcm5fdGgzX3IwcDM1`.
- Output:** The output field displays the decoded result: `|l3arn_th3_r0p35`.

Through bruteforcing we know it's base64
