1_wanna_b3_a_r0ck5tar challenge

This challenge is a continuation of the rockstar language challenge. We can use the link given that will lead us to an old version of the rockstar compiler.

In this challenge when compiling the code, an input is asked. We don't know right now what we need to input, so a way to know is to understand the rockstar language or we can just use a python interpreter for rockstar. (rockstar-py)

We can see that it prints out some characters that when converted to ASCII will pretty much say BONJOVI which is the flag. Sadly my python interpreter wasn't able to fully interpret the rockstar language.
